Benincà, a long history of 40 years

In 1979, Benincà Group was born, with a strong bond between two brothers, and a great desire for being independent for the production of automation devices for gates.

One is a mechanic and the other an electrician, Aldo and Luigi were really young. Nevertheless, their father had no doubt to let them start a business by using the land of the family. They demonstrated what they firmly believed, that they could achieve big things together.

Benincà Group

01

about us

A family is based on values

these are ours:

Responsibility

words, facts and products,
represent us
in every moment.

Loyalty/Respect

the company is made
with people.

Pride

being a member of the group
and represent it.

Passion

is the key of enthusiasm
and faith in the future.

**From an act of trust, we see how
those values are guiding
every entrepreneurial choice of Benincà,
which still today are reflected
on the brand that has been created.
It's a name where one can
recognise himself, like in a family.**

Vision

Benincà; good products, good people, one family.

Mission

Like a family.

We support our partners and customers to grow together, a synergy defined by trust and built with care.

We share products and services for the safety and freedom of people, which make us proud of our name.

BENINCA
GROUP

From physical place to virtual space, our social network tell about people, products, news, values, and projects around the world. We share with our partners the enthusiasm of being just like one big family!

The presence of the brand on social media with sponsorship and SEO optimisation. Main goal for the website: Optimisation of the indexing in the researches, brand awareness and lead generation with the collection of new contacts.

Benincà Technology to open

Benincà is the historical company of the group, specialized in the production of automations devices for doors, gates, road barriers and electronic accessories. Originated from the passion of the two founding partners, today it represents italian expertise in the world through a constant quest for excellence in materials and technologies, thanks to an international network of professionals. Through the years, the company has chosen to keep the design and production systems in-house to ensure the ultimate control of each production phase.

Benincà does not compromise on performance and durability, that's why the quality of electronics and materials are unparalleled.

WHY

BENINCA
TECHNOLOGY TO OPEN

BENINCA

OR

Hi-Motions opening solution

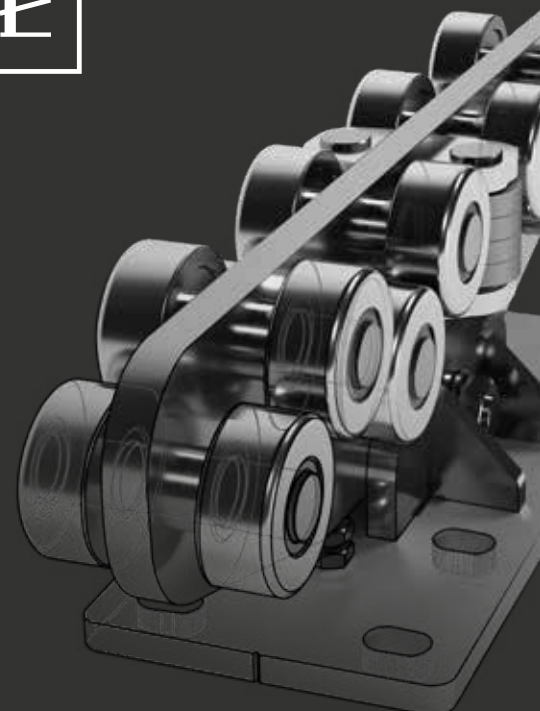

HI-MOTIONS became part of the Benincà Group in 2009. Production of gate accessories was promptly combined with experience in the automation industry. The synergy between two different but related fields paved the way for the development of products and solutions designed for professional users. The range of HI-MOTIONS products can be summarised in: accessories for sliding gates, cantilever sliding gates, industrial doors swing gates and manual barriers.

All products are made internally, with strict inspections and constant collaboration with the Benincà Research and Development office. The distinctive concept of “Made in Italy” also becomes a goal to be pursued every day through the service provided and the design of customized products and systems.

“Opening solutions” thus summarizes the company’s mission: provide solutions for all types of closures, ensuring reliability, but above all, flexibility.

Why

OR

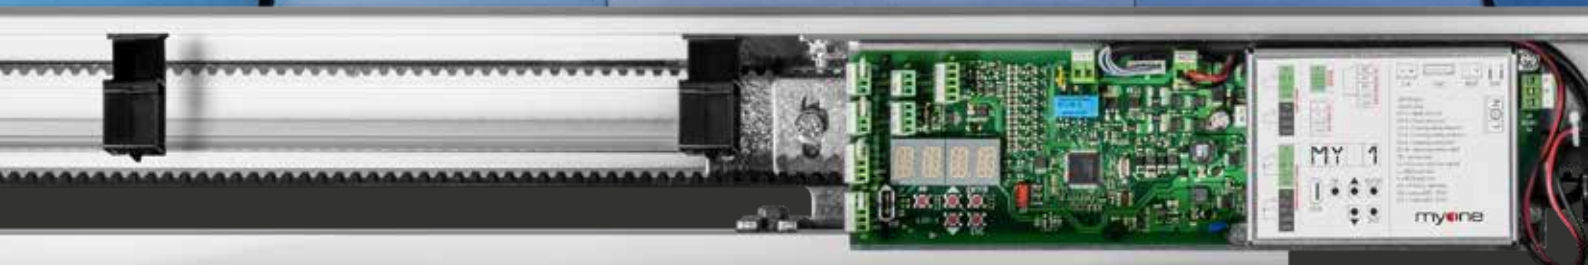

Myone, automatic doors

Automatic swing and sliding doors: this is the specialisation of MYONE, which operates in industrial and urban contexts, but not only. With a product conceived and designed for professionals, which guarantees maximum functionality through intuitive and simple access to technology. The product lines have expanded in recent years thanks to investments and precise choices. Today the company is able to provide a complete range of automations that are the result of experience, professionalism, research and design.

MYONE

myone

The new LUCE WORKS doors with IP65 control unit allow application in marine environments, guaranteeing moisture and salt-proof operation.

The new LUCE WORKS P, on the other hand, is specifically designed to be installed in swimming pools even with submerged doors, ideal for spa pools or wellness centres.

OR

why

Rise

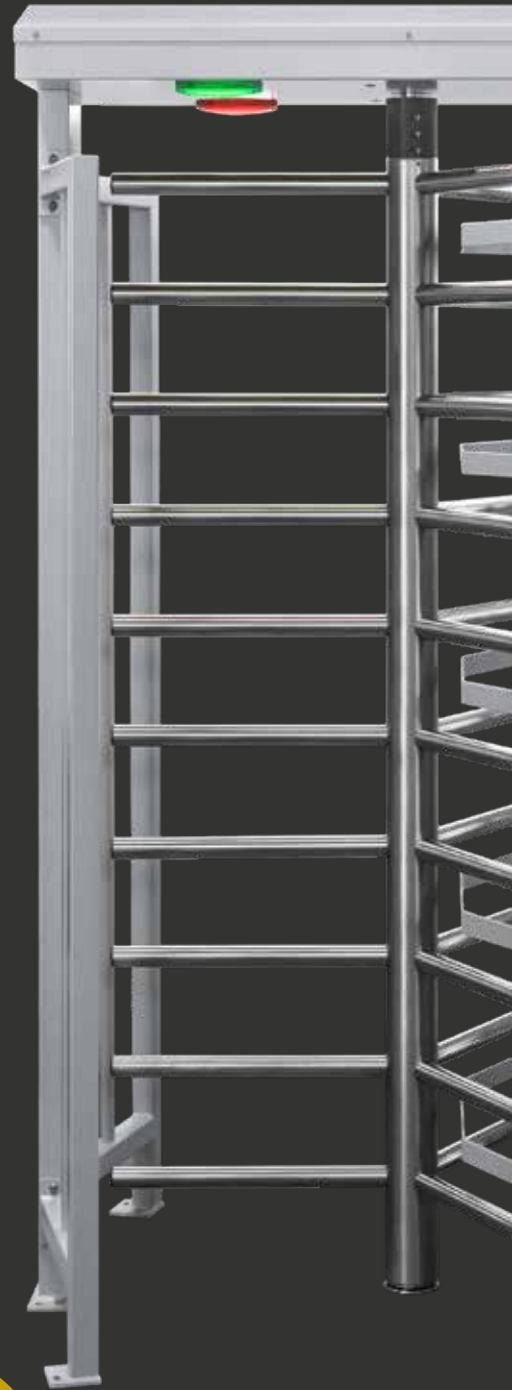

smart moving

RISE is the company in the Benincà Group specialised in security systems. Through the production of automatic, semiautomatic, fixed bollards and turnstiles, it deals on a daily basis in regulating the movement of vehicles or people by securing public, industrial or private contexts.

For the company, SMART MOVING is not only a payoff, but a promise of reliability that is achieved through the design and the continuous research of innovative solutions allowing you to improve mobility in different daily contexts.

A “clever” movement, as it includes a highly technological level, a promise that is confirmed every day through the constant research and development of the Benincà Group. Design and production are rigorously managed within the company allowing RISE to be one of the leading characters of Italianness in the world.

Seav, electronic solutions for motion control

WHY

Seav srl was established in 1983 in Castelfidardo, a town nestled among Marche's hills with an old tradition in accordion production. Today, this small town has grown into a significant electronics district. After collaborating with innovative companies like IBM and Olivetti, Giuseppe and Rosalba Lepretti established a company manufacturing control units for gates and rolling shutters.

The miniaturisation of the transmitter is a critical factor for Seav's growth, complemented by active participation in major trade fairs, facilitating its international expansion.

In 2008, the company moved to Osimo, in a new and larger production plant. In 2016, when a new generation took charge in an increasingly competitive sector, the company began considering collaborations with larger corporations to achieve significant growth outcomes.

This strategy culminated in 2022 when the company started collaborating with the Benincà Group.

Seav and Benincà share the same vision, values and strong family roots. That's why they both value the relationship with their clients, employees, and territory.

The agreement, finalised at the end of 2023, marked the beginning of a fruitful journey, opening up new market opportunities and the potential development of fully Italian-made integrated products for openings. This marked a new beginning for Seav, aligning itself with a large family that has thrived in the B2B sector for over 40 years and continues to believe in the future.

Seav, A product entirely "made in Italy" for electronics that are increasingly closer to the needs of installers

Smart Products

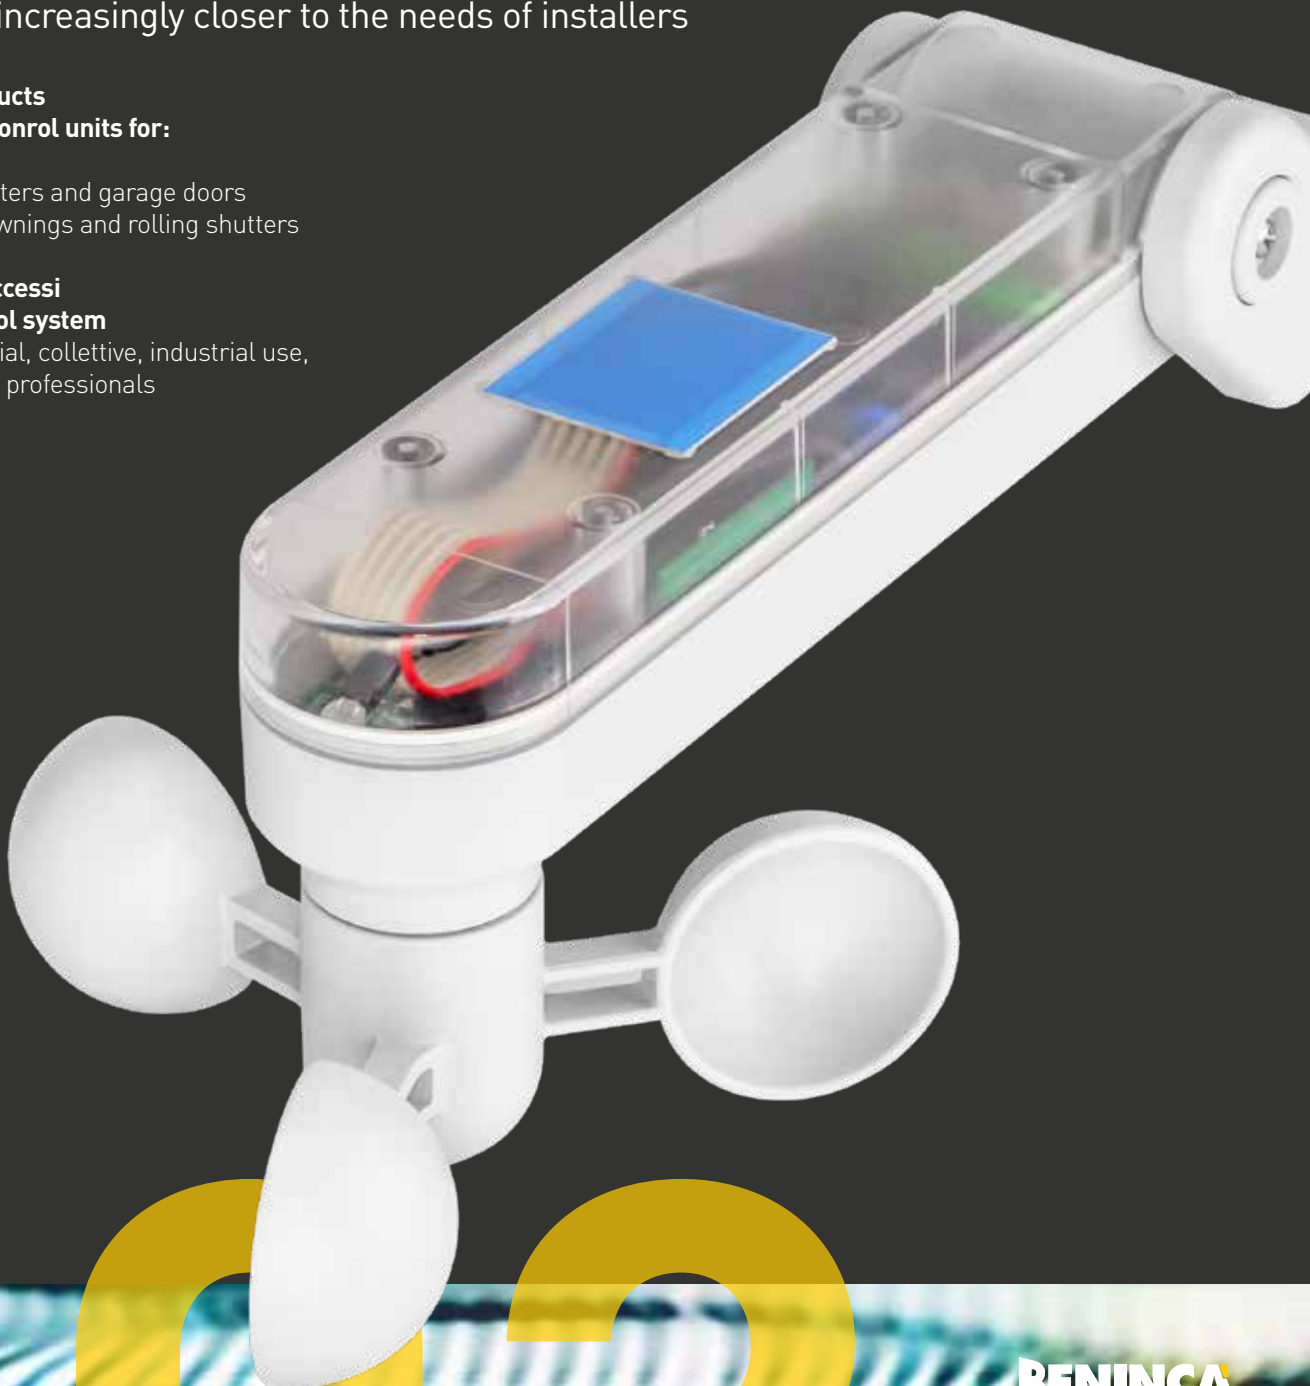

Electronic control units for:

- gates
- roller shutters and garage doors
- pergole, awnings and rolling shutters

Controllo accessi

Radio control system

For residential, collettive, industrial use, dedicated to professionals

WHY

CAB, more than automation

Launched in 1992 by the founding partners of Automatismi Benincà, CAB immediately stood out for its high level of specialisation. Its product range has been expanded over the years and now is characterized by six different range: operators for roller shutter, hydraulic actuators for swing gates and automation for awnings, shutters, windows and vasistas.

The plant in Velo D'Astico (Vicenza, Italy) is where products take form. The design phase takes place in the Benincà Group R&D Department while the product is tested, validated and put into production at CAB.

The concept of 'Made in Italy' is therefore also one of the cornerstones of this company, an indisputable strength, a factor that can make the difference together with the quality of the components.

The pay-off 'More Than Automation' testifies not only the desire to work in dedicated sectors, but also all the values that are brought into the world through the products: passion, innovation and Made in Italy.

CAB
MORE THAN AUTOMATION

BYOU, save your energy

BYOU is the Automatismi Benincà brand's specialized in the production of automation for garage doors and gates for residential use, designed to be quick and easy to install.

From the very beginning, the kits dedicated to the DIY sector are equipped with an innovative energy-saving system (ESA SYSTEM) that reduces costs related to automation power supply. The regular motors and accessories, absorb power, even when the system itself is idle (stand-by). BYOU, thanks to this particular device, completely disconnects the accessories in times of inactivity.

This results in considerable power savings compared to normal products on the market, prefiguring a DIY-friendly product for a sustainability-conscious audience.

WHY

SAVE YOUR ENERGY

BYOU

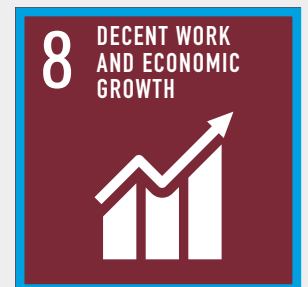

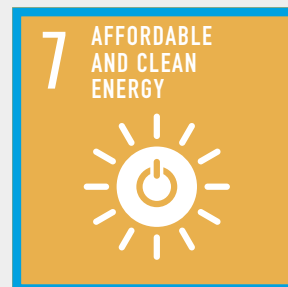

How does **Benincà** contributes in society?

W
A
D
Y

Our Benincà Group technology ensures security, comfort, and freedom in people's everyday life. By meeting our corporate mission, we are increasing our value in a sustainable way:

- We have patented the so-called **Saving Energy System for our motors** (ESA System), which reduces absorption during standby phases, and thus energy consumption
- We have installed a **photovoltaic-powered air conditioning system** at our premises to increase the well-being of our employees
- We financially **support the culture and welfare of our territory** and ensure the well-being of our community by not offshoring
- **Competence has no gender.** That's why we decided to focus on people's skills to build a team where men and women have equal opportunities
- Collaborating with Vaia Cube, thanks to the Christmas presents, **we have contributed to the planting of 230 trees**
- Since 2016 Benincà has been a supporter of the projects of "**I Bambini delle Fate**" for social inclusion.

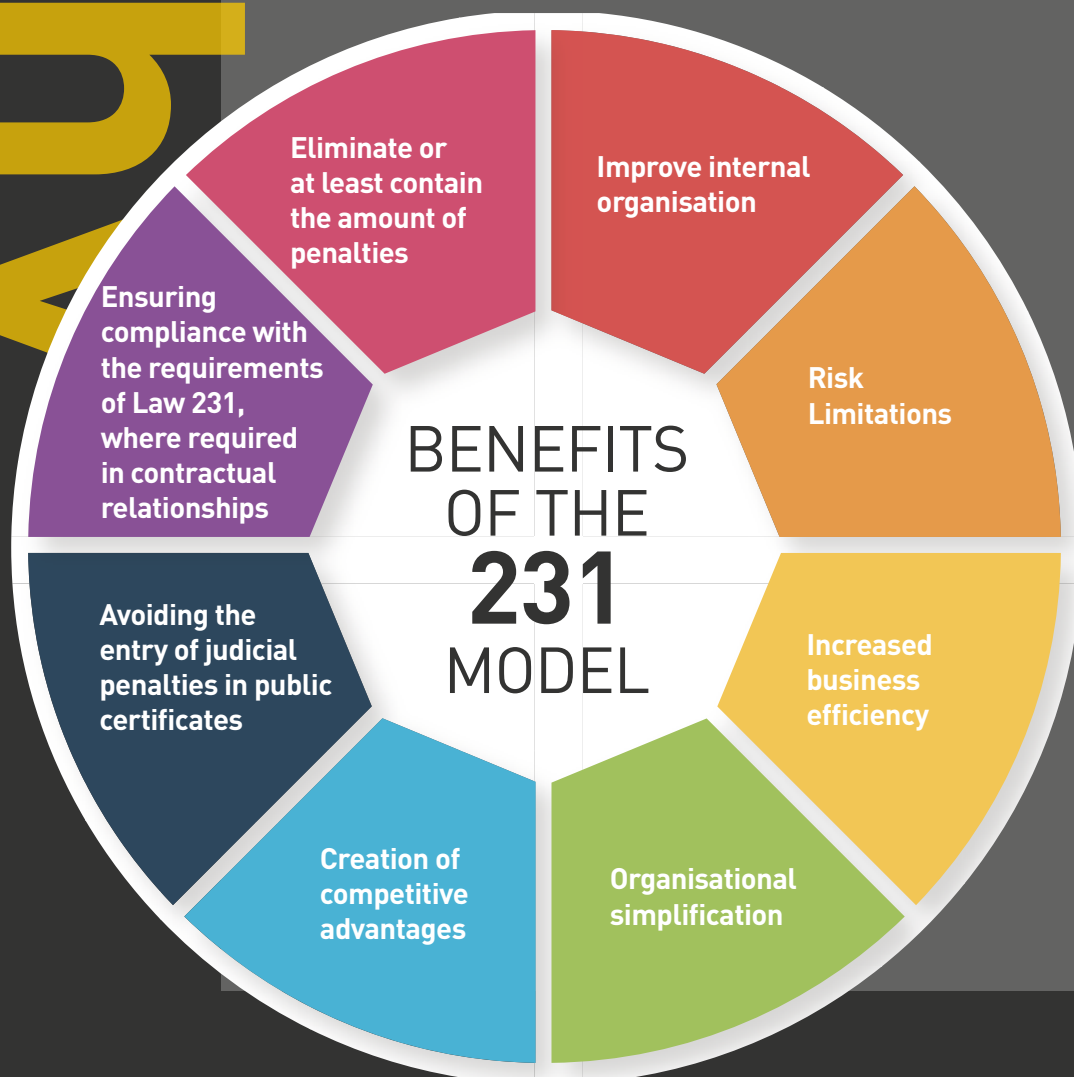

...and we continue to do more, day by day

Benincà's Code of ethics and organisational model

The Code of ethics collects the company's values, mission, vision, and guidelines. It indicates the business' goals and sets out the conduct and behaviours of those interacting with Benincà, i.e. partners, financial market, clients, internal and external collaborators, and the community. It is the foundation for corporate development promoting a culture of lawfulness and criminal risk reduction, where ethics entails social and environmental awareness and responsibility for the world the company lives in.

Benincà's Organisation and Control Model complies with Italian Legislative Decree 231/2001. It confirms, even at an institutional level, a corporate culture based on lawfulness and fairness, where no unlawful conduct is allowed, even if committed in the company's interest or to its advantage. Therefore, the OCM is an essential corporate tool for controlling the company's decision-making and operational processes. It's also a coherent system of principles, organisational, management and control procedures overseen by a Supervisory Board, which monitors the effectiveness of the Model and its correct application.
